

Development of a polyvalent detection method for Begomoviruses presenting a threat to the European tomato industry

*A SAISON, P GENTIT – Virology team – UBVO
ANSES/ Plant health laboratory
7 rue jean Dixméras 49044 Angers Cedex 01 - FRANCE*

Begomoviruses

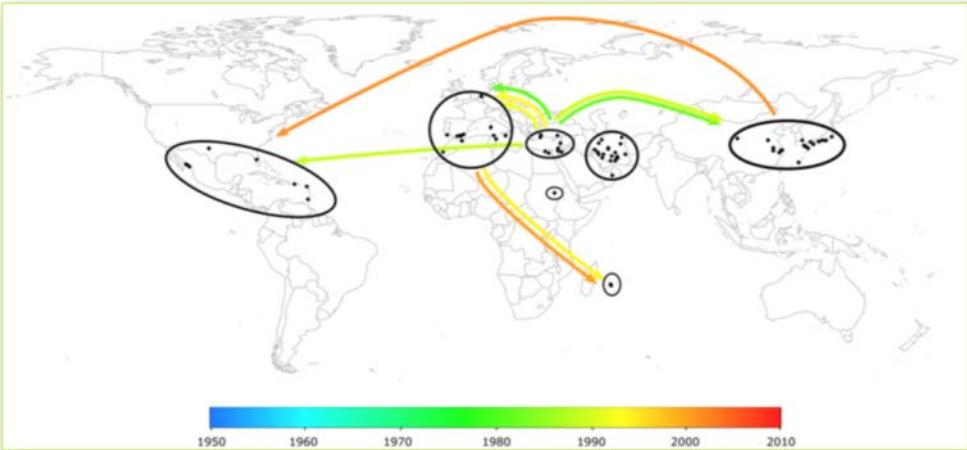

- Geminiviridae family,
- Circular genome of ssDNA
- Twinned particles
- Monopartite or bipartite genomes
- Whitefly transmitted (*Bemisia tabaci*) : circulative and persistent
- Dicotyledonous plants
- Associated with one or two type of satellites (Alpha, Beta)

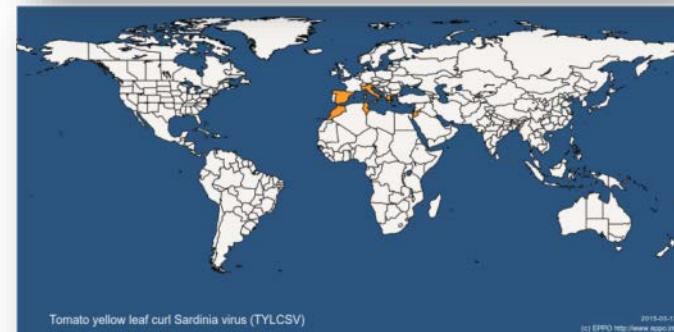

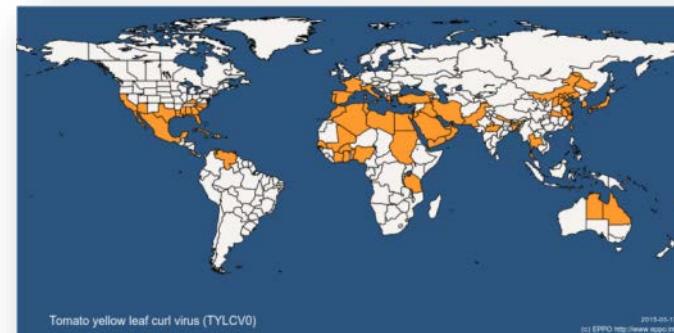

Tomato yellow leaf curl disease

- One of the **most harmful disease** of tomato widespread over the world (Hanssen *et al.*, 2010)
- Disseminated by its vector : *Bemisia tabaci*
- Associated with **several strains** of TYLCV (5) (Fauquet *et al.*, 2010) and species
- **Two main species** in Europe : TYLCV (strains Mild and IL) and TYLCSV (Just *et al.*, 2014) - Monopartite virus, 6 ORFs

Worldwide spread of *Tomato yellow leaf curl virus* (TYLCV)
from Lefeuvre *et al.* (2010)

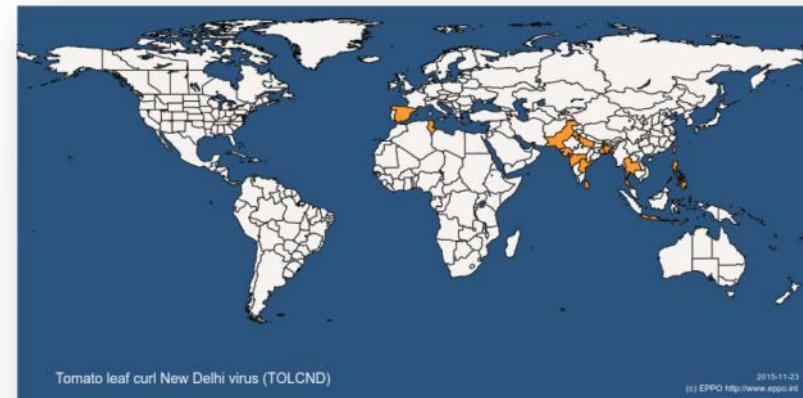

Other Begomoviruses

- Three others Begomoviruses, not present in France, should be considered as a potential threat for the tomato production:

1. Tomato leaf curl New Delhi virus (ToLCNDV)

- Bipartite virus,
- infecting solanaceous and cucurbitaceous plants (severe symptoms on Zucchini)
- Emerging threat, already present in Europe (Spain)

Other Begomoviruses

- Three others Begomoviruses, not present in France, should be considered as a potential threat for the tomato production:
 1. Tomato leaf curl New Delhi virus (ToLCNDV)
 2. **Tomato mottle virus (ToMoV)**
 - Bipartite virus,
 - infecting solanaceous (mainly tomato)
 - Emerging threat in North and South America

Other Begomoviruses

- Three others Begomoviruses, not present in France, should be considered as a potential threat for the tomato production:
 1. Tomato leaf curl New Delhi virus (ToLCNDV)
 2. Tomato mottle virus (ToMoV)
 3. Tomato leaf curl disease (ToLCD)
 - Two different type: ToLCKMV (Comores) and ToLCMLV (Mali)
 - Monopartite viruses,
 - infecting solanaceous (mainly tomato)

Regulation

- Regulated under the directive 2000/29EC
- Included in different EPPO list according to their prevalence and risk analysis

Name	EPPO	EC	Prevalence	
			Europe	France
Tomato mottle virus	ToMoV	A1 list	Annex IA1	No
Tomato leaf curl virus*	ToLCV	-	Annex IA1	No
Tomato leaf curl New Delhi virus	ToLCNDV	Alert list	Annex IA1	Yes
Tomato yellow leaf curl sardinia virus	TYLCSV	A2 list	Annex IIA2	Yes
Tomato yellow leaf curl virus	TYLCV	A2 list	Annex IIA2	Yes

Test assessment: Performance criteria

- Definition of performance criteria evaluated (EPPO PM7/76 or ISO16140)
 - **Diagnostic sensitivity** Proportion of infected / infested samples testing positive compared to results from an alternative test (or combination of tests).
$$\text{Sensitivity} = \text{true positives (PA)} / (\text{true positives (PA)} + \text{false negatives (ND)})$$
 - **Diagnostic specificity** Proportion of uninfected samples (true negatives) testing negative compared to results from an alternative test (or combination of tests).
$$\text{Specificity} = \text{true negatives (NA)} / (\text{true negatives (NA)} + \text{false positives (PD)})$$
 - **Repeatability** Level of agreement between replicates of a sample tested under the same conditions
 - **Analytical sensitivity** or Limit of detection is the smallest amount of target that can be detected reliably

Antisera assessment

- Evaluation of the sensitivity and specificity of 4 different antisera commonly used by accredited laboratories for official controls of the TYLCV
 - **Antisera :**
 - Adgen (EPPO 7/50) (Sulfite)
 - Bioreba with two extraction buffers (Bioreba and sulfite)
 - Loewe (Sulfite)
 - Sediag (Sulfite)
 - **Targets**
 - TYLCV (11 Israel, 3 Mild), TYLCSV (2)
 - **Non targets**
 - Pepper (1), Tomato (3), ToSRV (1), ToMoV (1)

Antisera assessment

- evaluation of the sensitivity and specificity of 4 different antisera commonly used by accredited laboratories for official controls of the TYLCV

	Antisera ADGEN	Antisera BIOREBA			Antisera LOEWE	Antisera SEDIAG
	Sulfite buffer	Sulfite Buffer	Bioreba buffer		Sulfite buffer	Sulfite buffer
			Ind = PA	Ind = ND		
Samples	25	25	25	25	23	23
NA	7		7	7	6	
PA	6		10	6	5	
ND	11		8	12	12	
PD	1	2	0	0	0	0
Sensitivity	35%	83%	56%	33%	29%	18%
specificity	88%	71%	100%	100%	100%	100%

Antisera assessment

- Evaluation of the sensitivity, specificity and repeatability of the selected antisera
 - **Antisera :**
 - Bioreba with sulfite extraction buffers
 - **11 x 4 : Targets**
 - TYLCV (3 Israel, 1 Mild), TYLCSV (2), ToLCNDV, ToMoV, ToLCV, ACMV
 - **8 x 4 : Non targets**
 - TICV, ToCV, PepMV, EMDV, TSWV, Healthy (3)

		0,055	pos		0,062	pos

Antisera assessment

• Conclusions

- Only one antisera can be recommended for routine analysis of TYLCD viruses
- Lack of sensitivity for some TYLCV isolates (false negatives) : 73% of sensitivity
- Cross reaction with different others Begomoviruses without possibility of correct identification

	ELISA Bioreba Sulfite Buffer

PCR assessment

A multiple sequence alignment of 29 TYLCV, 9 TYLCSV, 7 TOLCV and 9 ToLCNDV sequences available at NCBI database and from different geographical regions was made using the ClustalX program with Genious software.

- Detection of a wide range of TYLCD associated viruses, ToLCD associated viruses, ToLCNDV, ToMoV and some others Begomoviruses

PCR assessment

Sample	Virus	PCR Accotto et al., 2000	PCR Park et al., 2014	New primers
EL-6	Tomato severe rugose virus (ToSRV)	+	-	+++
EL-12	African cassava mosaic virus (ACMV)	+++	+++	+++
EL-17	Tomato chlorotic mottle virus (ToCMoV)	+	+++	+++
EL 29	African cassava mosaic virus (ACMV)	+	+++	+++
EL 30	Squash leaf curl virus (SLCV)	-	-	+++
EL 39	Watermelon chlorotic stunt virus (WmCSV)	-	-	+++
EL 40	Indian cassava mosaic virus (ICMV)	+++	+	+++
EL 41	Sri Lankan cassava mosaic virus (SLCMV)	+++	-	+++
EL 42	Bean golden mosaic virus (BGMV)	-	-	+++

Conclusion

- Among 4 different antisera, only one reach an acceptable level of sensitivity
- None antisera leads to distinguish TYLCV from other Begomoviruses
- A set of polyvalent degenerated primers was developed to allow the detection of the main Begomoviruses presenting a threat for the EU : TYLCV, TYLCSV, ToLCNDV, ToMoV, ToLCD associated viruses
- This set allow the detection of a range of 8 Begomoviruses

**Thank you for your
attention**

Anne Saison
